| Topic/unit/core selection | Matter |

Matter Cadence Adapted
by Mikka Irusta and Rhonda López

We just know what we've been told,
matter can change and unfold.
There are different forms that matter can take,
so listen up for goodness sake!

Sound off, changing forms,
Sound off, states of matter,
Sound off, solids, liquids, gases!

Solids have a definite shape,
like a helmet or a superhero cape.
Solids have definite volume too,
like all the animals in the zoo.

Sound off, changing forms,
Sound off, states of matter,
Sound off, solids, liquids, gases!

Liquids are another state,
they have volume and change their shape.
Water and juice to name a few,
raindrops, milk, and Rio Grande too!

Sound off, changing forms,
Sound off, states of matter,
Sound off, solids, liquids, gases!

Gas is another state,
it doesn't always smell that great.
It has no volume and no shape,
We don't see them when they escape.

Sound off, changing forms,
Sound off, states of matter,
Sound off, solids, liquids, gases!
